Facade	Wooden facing, horizontal floorboards
Heating	Electric heaters
Fire resistance	-
Equipment	-

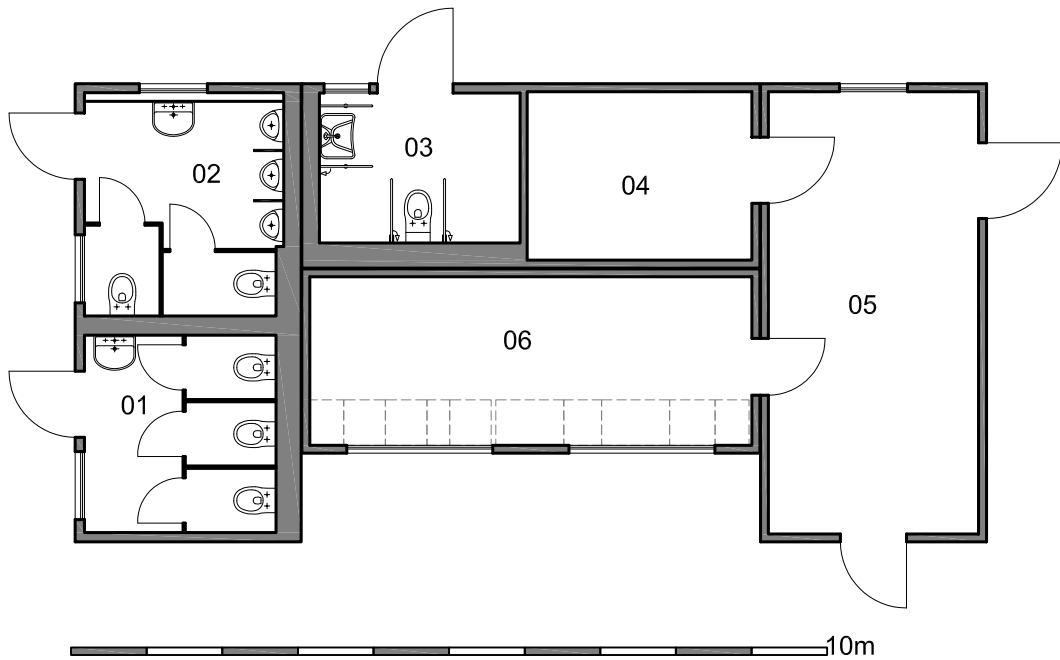

Description

In the German town of Lügde, this garden restaurant with its wooden facade gives the impression of a tourist refreshment stand. It retains the permanence of a solid structure and KOMA system advantages - rapid construction with no impact on its surroundings and the option to move the restaurant, if need be, and to relocate to another location.

The garden restaurant assembled from 4 modules offers a 50 m² of space. The first module serves as lavatories for customers, the second one as a lunch counter, and other two modules are used as a storehouse and auxiliary rooms for personnel. The building has a wooden floorboard facade.
